# 8 Notes

# 1.1 Intended use

## CAUTION!

Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

# INFORMATION!

*This device is a Group 1, Class A device as specified within CISPR11. It is intended for use in industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments, due to conducted as well as radiated disturbances.* 

#### INFORMATION!

The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

The variable area flowmeters are suitable for measuring gases and liquids.

### INFORMATION!

- The product may not contain any ferromagnetic particles or solids.
- The product must be sufficiently liquid and free of deposits.
- Avoid pressure surges and pulsing flows.
- Open valves slowly.
- Do not use solenoid valves.
- For accurate flow measurement, the application data should be consistent with the sizing data and calibration of the variable area flowmeter.

### The devices are particularly suitable for the measurement of small quantities of:

- Process or carrier gases
- Nitrogen, CO<sub>2</sub> or other industrial gases
- Sample flows for process analysers
- Purge fluids for measuring systems
- Air or water

### DANGER!

*For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.* 

### CAUTION!

Do not use any abrasive or highly viscous media.

# 1.2 Conformity

The manufacturer certifies successful testing of the product by applying the conformity mark on the device.

# This device fulfills the statutory requirements of the relevant directives and regulations.

For further information on directives, regulations, standards and certifications, please refer to the declaration of conformity which you can download from the manufacturer's website.

### DANGER!

For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.

#### CAUTION!

*For devices used in SIL applications, additional safety notes apply. For detailed information refer to the "Safety manual".* 

# 1.3 Pressure equipment directive

A conformity assessment in accordance with pressure equipment directive has been carried out for the devices described. Conformity is certified by applying the conformity mark. The number of the notified body is also stated.

The PED key describes the rating of the devices:

Example: PED/G1/4.3/SEP	
G	Gases and vapours
1	Fluid group 1
4.3	Article 4.3 of the directive 2014/68/EU
SEP	Sound engineering practice

Table 1-1: Example of PED key

The PED key identification can be found on the nameplate of the device (for details refer to *Nameplate* on page 13).

### INFORMATION!

The stated pressures (PS) and temperatures (TS) only apply as refers to the pressure resistance of the sensor body. As regards the functionality of the entire device, further restrictions of the maximum temperature may need to be observed (e.g. ATEX approval). Devices rated below category I due to their size, do not receive the conformity mark in the scope of the PED. These devices are subject to applicable sound engineering practice (SEP).

### **Residual risk**

A risk analysis in accordance with the pressure equipment directive has been carried out for the devices. The residual risk is described as follows:

- The devices are designed according to the valid and applicable rules and standards for static operation and their pressure resistance is calculated for the declared maximum pressure and temperature (no calculation for cyclical change).
- Responsibility for the use of the measuring devices with regard to corrosion resistance of the used materials against the measured fluid lies solely with the operator.
- Avoid abrasion.
- Avoid pulsation and cavitation.
- Protect devices from vibration and high-frequency oscillation.
- Draining (backflow) may be delayed due to the float in the measuring tube. Expect residue around the valve and in the flow regulator.
- Implement appropriate measures to counteract external fire hazards.

# 1.4 Safety instructions from the manufacturer

# 1.4.1 Copyright and data protection

The contents of this document have been created with great care. Nevertheless, we provide no guarantee that the contents are correct, complete or up-to-date.

The contents and works in this document are subject to copyright. Contributions from third parties are identified as such. Reproduction, processing, dissemination and any type of use beyond what is permitted under copyright requires written authorisation from the respective author and/or the manufacturer.

The manufacturer tries always to observe the copyrights of others, and to draw on works created in-house or works in the public domain.

The collection of personal data (such as names, street addresses or e-mail addresses) in the manufacturer's documents is always on a voluntary basis whenever possible. Whenever feasible, it is always possible to make use of the offerings and services without providing any personal data.

We draw your attention to the fact that data transmission over the Internet (e.g. when communicating by e-mail) may involve gaps in security. It is not possible to protect such data completely against access by third parties.

We hereby expressly prohibit the use of the contact data published as part of our duty to publish an imprint for the purpose of sending us any advertising or informational materials that we have not expressly requested.

## 1.4.2 Disclaimer

The manufacturer will not be liable for any damage of any kind by using its product, including, but not limited to direct, indirect or incidental and consequential damages.

This disclaimer does not apply in case the manufacturer has acted on purpose or with gross negligence. In the event any applicable law does not allow such limitations on implied warranties or the exclusion of limitation of certain damages, you may, if such law applies to you, not be subject to some or all of the above disclaimer, exclusions or limitations.

Any product purchased from the manufacturer is warranted in accordance with the relevant product documentation and our Terms and Conditions of Sale.

The manufacturer reserves the right to alter the content of its documents, including this disclaimer in any way, at any time, for any reason, without prior notification, and will not be liable in any way for possible consequences of such changes.

# 1.4.3 Product liability and warranty

The operator shall bear responsibility for the suitability of the device for the specific purpose. The manufacturer accepts no liability for the consequences of misuse by the operator. Improper installation or operation of the devices (systems) will cause the warranty to be void. The respective "Standard Terms and Conditions" which form the basis for the sales contract shall also apply.

# 1.4.4 Information concerning the documentation

To prevent any injury to the user or damage to the device it is essential that you read the information in this document and observe applicable national standards, safety requirements and accident prevention regulations.

If this document is not in your native language and if you have any problems understanding the text, we advise you to contact your local office for assistance. The manufacturer cannot accept responsibility for any damage or injury caused by misunderstanding of the information in this document.

This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device. Special considerations and precautions are also described in the document, which appear in the form of icons as shown below.

# 1.4.5 Warnings and symbols used

Safety warnings are indicated by the following symbols.

This warning refers to the immediate danger when working with electricity.

### DANGER!

DANGER!

*This warning refers to the immediate danger of burns caused by heat or hot surfaces.* 

# DANGER!

This warning refers to the immediate danger when using this device in a hazardous atmosphere.

# DANGER!

These warnings must be observed without fail. Even partial disregard of this warning can lead to serious health problems and even death. There is also the risk of seriously damaging the device or parts of the operator's plant.

### WARNING!

*Disregarding this safety warning, even if only in part, poses the risk of serious health problems. There is also the risk of damaging the device or parts of the operator's plant.* 

# CAUTION!

*Disregarding these instructions can result in damage to the device or to parts of the operator's plant.* 

### INFORMATION!

These instructions contain important information for the handling of the device.

# LEGAL NOTICE!

This note contains information on statutory directives and standards.

### • HANDLING

This symbol designates all instructions for actions to be carried out by the operator in the specified sequence.

This symbol refers to all important consequences of the previous actions.

# 1.5 Safety instructions for the operator

#### WARNING!

In general, devices from the manufacturer may only be installed, commissioned, operated and maintained by properly trained and authorized personnel. This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device.

# 2.1 Scope of delivery

# INFORMATION!

Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

### INFORMATION!

Do a check of the packing list to make sure that you have all the elements given in the order.

#### INFORMATION!

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

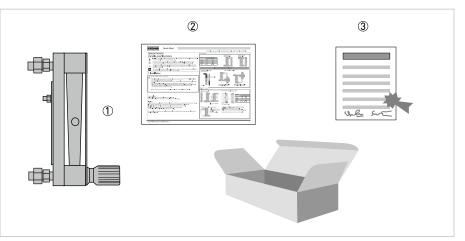

Figure 2-1: Scope of delivery

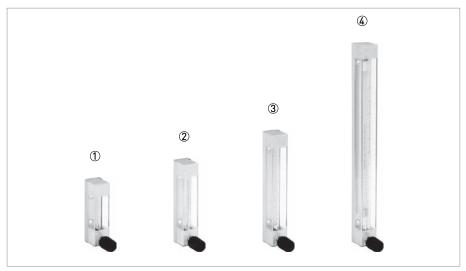

1 Measuring device in ordered version

Product documentation

③ Certificates, calibration report (supplied to order only)

# **2 DEVICE DESCRIPTION**

# 2.2 Device versions

#### Figure 2-2: Standard versions

- ① DK46 with connection dimension 90 mm / 3.55" and 4% max. permissible error
- 2 DK800 with connection dimension 125 mm / 4.92" and 2.5% max. permissible error
- 3 DK47 with connection dimension 175 mm / 6.89" and 2.5% max. permissible error
- 4 DK48 with connection dimension 325 mm / 12.8" and 1% max. permissible error

Figure 2-3: Optional versions

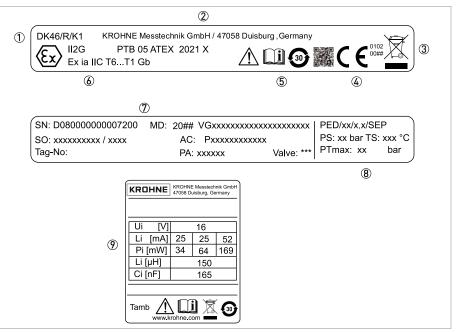

- DK device with flow regulator for fluctuating inlet and outlet pressures
- 0 DK device with limit switch and connection box (SIL2-compliant)
- ③ DK device with valve at top and calibrated to inlet pressure

# 2.3 Nameplate

### INFORMATION!

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

#### Figure 2-4: Examples of nameplates

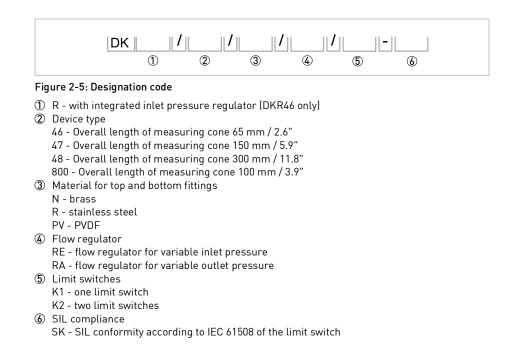

- Device type
- Manufacturer
- ③ Disposal symbol
- (4) Identification number of the notified body
- (5) Note to observe the documentation, China RoHs and data matrix code
- 6 Marking according to the notified body
- ⑦ Production data
- (8) Rating data: temperature & pressure rating
- $\textcircled{9} \quad \text{Electrical connection data}$

#### Additional markings on the measuring device

- SN serial number
- SO sales order / item
- Tag No. measuring point identifier
- MD manufacturing date
- PA production order
- Vx product configurator code
- AC article code

# 2.4 Description code

The description code consists of the following elements \*:

\* positions which are not needed are omitted (no blank positions)

# 3.1 General notes on installation

### INFORMATION!

Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

### INFORMATION!

Do a check of the packing list to make sure that you have all the elements given in the order.

### INFORMATION!

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

# 3.2 Storage

- Store the device in a dry, dust-free location.
- Avoid lasting direct exposure to the sun.
- Store the measuring device in the original packaging.
- The permissible storage temperatures for standard devices are: -40...+80°C / -40...+176°F

# 3.3 Installation conditions

# 3.3.1 Installation in the pipeline

CAUTION!

When installing the device in the piping, the following points must be observed:

- The variable area flowmeter must be installed vertically (within 5° of the vertical).
- Flow direction from bottom to top.
- Before connecting, blow or flush out the pipes leading to the device.
- Piping for gas flow need to be dried before the device is installed.
- Use connectors suitable for the particular device version.
- Align the piping centrically with the connection bores on the measuring device so they are free of stresses.
- If necessary, the piping has to be supported to avoid the vibrations transmitted to the measuring device.
- Do not lay signal cables directly next to cables for the power supply.

# 3.3.2 Panel mounting

For panel mounting, the panel cut-out must be prepared according to the drawing (for details refer to *Mounting options* on page 37).

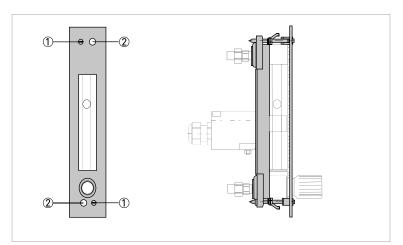

Figure 3-1: Position of screws for panel mounting

① Front side

Back side

# Mounting in the panel

- Slightly loosen the 2 screws ① on the front.
- Insert the device from the front into the panel cut-out.
- Align and fix the device with the two screws ① with 0.7 Nm.

### INFORMATION!

The option for panel mounting must be ordered with the device. Retrofit is not possible!

# ELECTRICAL CONNECTIONS

# 4.1 Safety instructions

# DANGER!

All work on the electrical connections may only be carried out with the power disconnected. Take note of the voltage data on the nameplate!

# DANGER!

Observe the national regulations for electrical installations!

# DANGER!

*For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.* 

# WARNING!

*Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.* 

### INFORMATION!

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

# 4.2 Limit switches

The flowmeters can be equipped with a maximum of two limit switches. The switching function of the limit switch can be designed as monostable or bistable.

Monostable function:	Switching pulse as float passes through switching point, independent of direction of movement.
Bistable function:	Stable changeover as float passes through switching point.
Example (bistable):	Above limit: switching point "High"
	Below limit: switching point "Low"

For switching performance and electrical data refer to section "Technical data".

# ELECTRICAL CONNECTIONS

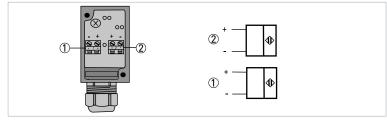

Figure 4-1: Electrical connection of 2-wire NAMUR limit switches with connection box

- ① Lower limit switch to terminal 1
- ② Upper limit switch to terminal 2

The connection box includes an EMC filter unit.

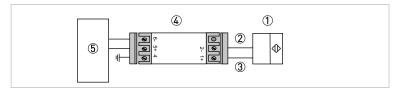

Figure 4-2: Electrical connection of 2-wire NAMUR limit switches without connection box

- ① Limit switch (without connection box)
- Blue cable -
- ③ Brown cable +
- ④ External EMC filter
- (5) Receiver device

When connecting to an EMC filter, the ground terminal must be connected to the back rail of the flowmeter.

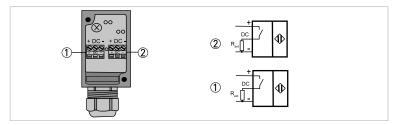

Figure 4-3: Electrical connection of 3-wire transistor limit switches with connection box

- ① Lower limit switch to terminal 1
- ② Upper limit switch to terminal 2

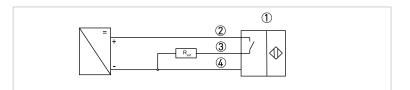

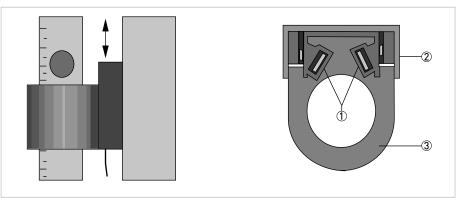

Figure 4-4: Electrical connection of 3-wire transistor limit switches without connection box

- ① Limit switch (without connection box)
- ② Brown cable: supply voltage +
- 3 Black cable: switch
- ④ Blue cable: supply voltage -

# 4.3 Settings of limit switches

#### Figure 4-5: Settings of limit switches

- ① Clamping screw
- 2 Back rail
- Limit switches

# The following procedures are to be performed (DK../../K):

- Remove both clamping screws ①.
- Slide the limit switch over the measuring glass.
- Use the two clamping screws ① to fasten the limit switch ③ to the back rail ② of the measuring device.
- Re-install the protective cover following installation.

For installation after the fact, the measuring glass must be removed. Refer to chapter "Service".

### CAUTION!

When setting the limit switch, ensure that the cable is placed in a way that it does not get damaged.

Avoid canting of the limit switch during installation: glass breakage

The connecting lead of the limit switch is guided through a hole in the base of the device and sealed.

Observe the following for bistable limit switches with external EMC filters in separate DIN rail housing:

The EMC filter unit and the back rail of the flowmeter must be galvanically connected and grounded.

# 4.4 Minimum distance between two limit switches

Where two limit switches are used in one device and also where meters with limit switches are in close proximity of each other, minimum distances must be maintained in order to avoid mutual influence of the switches.

Figure 4-6: Minimum distances

Minimum	2-wire		3-wire	
distance	[mm]	[inch]	[mm]	[inch]
1	16	0.63	45	1.77
2	6	0.24	30	1.18

Table 4-1: Minimum distances

# 4.5 Power-up performance

### 2-wire limit switch NAMUR, monostable

Float outside of the limit switch: signal  $\geq$ 3 mA Float inside of the limit switch (centre): signal  $\leq$ 1 mA

### 2-wire limit switch NAMUR, bistable

Independent of the float position and passage ①: signal  $\geq$ 3 mA Prerequisite: the float is outside of the limit switch.

### INFORMATION!

For the proper initialisation after power up, the bistable NAMUR limit switch should pass through each of  $\hat{D}$  and  $\hat{Q}$  once.

### 3-wire limit switch, transistor

Independent of the float position and passage (2): signal  $\leq 1 \text{ V}$ Prerequisite: the float is outside of the limit switch.

Figure 4-7: Power-up performance

# 4.6 Switching performance of the limit switches

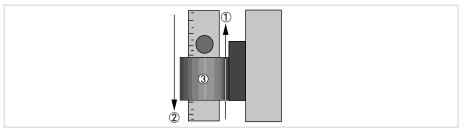

Figure 4-8: Switching performance of the limit switches

Limit switches	I7R2010-NL	I7R2015-NL	I7R2010-N	I7R2015-N	RB15-14-E2
	RC10-14-N3	RC15-14-N3	RC10-14-N0	RC15-14-N0	
Ring diameter	10 mm / 0.4"	15 mm / 0.6"	10 mm / 0.4"	15 mm / 0.6"	15 mm / 0.6"
Switching function	bistable	bistable	monostable	monostable	bistable
NAMUR	yes	yes	yes	yes	no
Supply voltage U <sub>0</sub>	8 VDC	8 VDC	8 VDC	8 VDC	1030 VDC
Switching signal	1 mA passage↓	1 mA passage↓②		3 mA – float outside of the limit switch ①, ②	
	3 mA passage ↑ ①		1 mA - float inside of the limit switch ③		$\geq$ U <sub>0</sub> - 3 VDC

Table 4-2: Switching performance

# INFORMATION!

For devices with the top valve the switching function is inverted because the limit switch is upside down!

For the proper initialisation after power up, the bistable NAMUR limit switch should pass through each of 1 and 2 once.

# **4** ELECTRICAL CONNECTIONS

# 4.7 Reversed function of the limit switches

The switching function of the bistable limit switches can be reversed by turning the limit switches.

To do this, the pre-fabricated connection cable must be long enough.

When installing and setting, ensure that the cable is placed in a way that it does not get damaged.

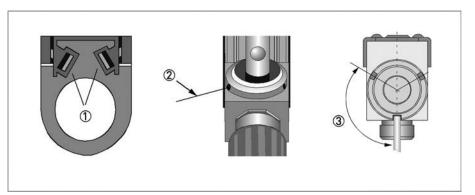

Figure 4-9: Reversed function of the limit switches

- Loosen the terminal screw ①.
- Turn the turnbuckle ② counter-clockwise to loosen.
- Pull out the measuring glass with the limit switch.
- Turn the limit switch by 180°.
- Mount the measuring glass.
- Tighten the turnbuckle ② by hand.
- Use a 3 mm pin to tighten the turnbuckle by turning 4 to max. 5 times in 120° increments ③ in a clockwise direction.

### CAUTION!

*To avoid breakage, the measuring glass must be positioned centrically between the gaskets.* 

Test the leak tightness by suitable measures prior to start-up.

# 4.8 Grounding connection

The measuring unit is grounded on the back rail ① (M4 thread). This connection only ensures electrostatic grounding of the device and does not meet the requirements for equipotential bonding.

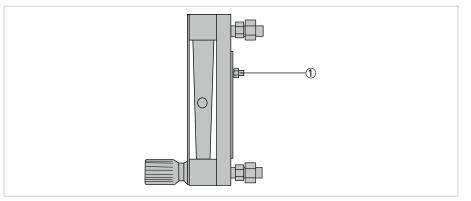

Figure 4-10: Position of the ground terminal

# DANGER!

*The grounding cable should not transmit any interference voltages. Do not use this grounding cable to ground any other electrical devices.* 

# 4.9 Ingress protection

The limit switches with connection housing meet all requirements of ingress protection IP65.

### Therefore it is essential to observe the following points:

- Use only original gaskets. They must be clean and free of any damage. Defective gaskets must be replaced.
- The used electrical cables must be undamaged and must comply with regulations.
- The cables must be laid with a loop ③ upstream of the measuring device to prevent water from getting into the housing.
- The cable glands ② must be securely tightened.
- Close the unused cable glands with blanking plugs .

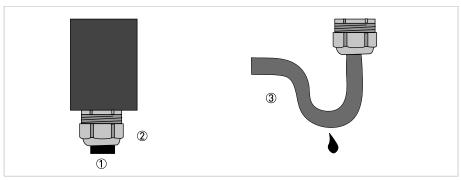

Figure 4-11: Ingress protection

# DANGER!

*After all servicing and maintenance work on the measuring device, the specified protection class must be ensured again.* 

# 5.1 Start-up

# CAUTION!

When starting up the device, the following points must be observed:

- Compare the actual operating pressure and the product temperature of the system with the specifications on the nameplate (PS and TS). These specifications may not be exceeded.
- Ensure the material compatibility.
- Close the needle valve at the flowmeter.
- Slowly open the shut-off valve.
- When measuring liquids ensure that the pipelines are carefully evacuated.
- When measuring gases, increase pressure slowly.
- Avoid float impact (e.g. caused by solenoid valves), as this is likely to damage the measuring unit or float.
- Open needle valve at the flowmeters and set the required flow rate.
- The top edge of the float, marks the reading line for flow values.

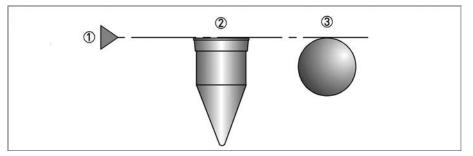

Figure 5-1: Reading line

- ① Reading line
- Float shape "AIII"
- ③ Float shape "ball"

# 6.1 Maintenance

Within the scope of routine maintenance of the system and pipelines, the flowmeter should also be inspected for signs of dirt, corrosion, mechanical wear and leaks, as well as damage to the measuring device.

We advise that inspections are carried out at least once per year.

The device must be removed from the pipeline before cleaning.

### CAUTION!

Pressurised pipes have to be depressurised before removing the device. In the case of devices used for measuring aggressive or hazardous media, appropriate safety precautions must be taken with regard to residual liquids in the measuring unit. New gaskets have to be used when re-installing the device in the piping.

# CAUTION!

*The packing seal for the valve may have to be adjusted during the service life. The union nut must be tightened for this. Comply with a maximum torque of 5 Nm.* 

# CAUTION!

*Valves that have not been used for a longer period of time may exhibit a higher actuating torque.* 

# 6.2 Changing the measuring cone

- Close the valves located upstream and downstream of the device.
  - Close the needle valve.
  - Push the protective cover upwards and remove it towards the front.
  - Turn turnbuckle ① counter-clockwise to loosen. Devices with a top and bottom fitting made of PVDF (DK.../PV) have a turnbuckle in the device head (6 mm Allen key). This can be loosened with approximately one full turn. The measuring glass can be removed to the front.

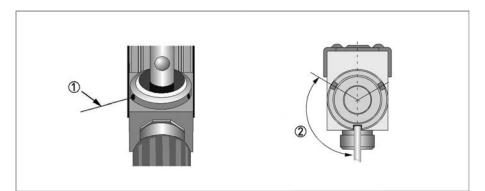

Figure 6-1: Changing the measuring cone

### CAUTION!

Residual liquid or gas may leak out!

- Install in the reverse order.Tighten turnbuckle ① by hand.
- Use a 3 mm pin to tighten the turnbuckle by turning 4 to max. 5 times in 120° increments ② in a clockwise direction.

# CAUTION!

To avoid breakage, the measuring glass must be positioned centrically between the gaskets.

Test the leak tightness by suitable measures prior to start-up.

# 6.3 Spare parts availability

The manufacturer adheres to the basic principle that functionally adequate spare parts for each device or each important accessory part will be kept available for a period of 3 years after delivery of the last production run for the device.

This regulation only applies to spare parts which are subject to wear and tear under normal operating conditions.

# 6.4 Availability of services

The manufacturer offers a range of services to support the customer after expiration of the warranty. These include repair, maintenance, technical support and training.

#### INFORMATION!

For more precise information, please contact your local sales office.

# 6.5 Returning the device to the manufacturer

# 6.5.1 General information

This device has been carefully manufactured and tested. If installed and operated in accordance with these operating instructions, it will rarely present any problems.

### WARNING!

Should you nevertheless need to return a device for inspection or repair, please pay strict attention to the following points:

- Due to statutory regulations on environmental protection and safeguarding the health and safety of the personnel, the manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.
- This means that the manufacturer can only service this device if it is accompanied by the following certificate (see next section) confirming that the device is safe to handle.

### WARNING!

*If the device has been operated with toxic, caustic, radioactive, flammable or water-endangering products, you are kindly requested:* 

- to check and ensure, if necessary by rinsing or neutralising, that all cavities are free from such dangerous substances,
- to enclose a certificate with the device confirming that it is safe to handle and stating the product used.

# 6.5.2 Form (for copying) to accompany a returned device

# CAUTION!

To avoid any risk for our service personnel, this form has to be accessible from outside of the packaging with the returned device.

Company:	Address:		
Department:	Name:		
Telephone number:	Email address:		
Fax number:			
Manufacturer order number or serial numb	er:		
The device has been operated with the follo	wing medium:		
This medium is:	radioactive		
	water-hazardous		
	toxic		
	caustic		
	flammable		
	We checked that all cavities in the device are free from such substances.		
	We have flushed out and neutralized all cavities in the device.		
We hereby confirm that there is no risk to persons or the environment caused by any residual media contained in this device when it is returned.			
Date:	Signature:

# 6.6 Disposal

### LEGAL NOTICE!

Disposal must be carried out in accordance with legislation applicable in your country.

### Separate collection of WEEE (Waste Electrical and Electronic Equipment):

According to the directive 2012/19/EU or UK Regulation 2013 No. 3113, the monitoring and control instruments marked with the WEEE symbol and reaching their end-of-life **must not be disposed of with other waste**.

The user must dispose of the WEEE to a designated collection point for the recycling of WEEE or send them back to our local organisation or authorised representative.

# 7 TECHNICAL DATA

# 7.1 Functional principle

The flowmeter operates in accordance with the float measuring principle.

The measuring unit consists of a glass cone in which a float can move freely up and down. The flow goes from bottom to top.

The float adjusts itself so that the buoyancy force A acting on it, the form drag W and weight G are in equilibrium: G = A + W.

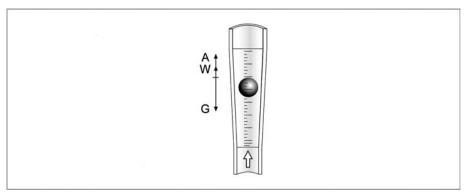

Figure 7-1: Operating principle

The height of the float is read on the scale of the measuring glass and indicates the flow rate.

The top edge of the float marks the reading line for flow values.

# 7.2 Technical data

### INFORMATION!

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Downloadcenter).

## Measuring system

-	
Application range	Flow measurement of liquids and gases
Function / Measuring principle	Float measuring principle
Measured value	
Primary measured value	Float position
Secondary measured value	Operating volume flow, nominal volume flow or mass flow

#### Measurement accuracy

Max. permissible error DK46	3% of full scale range
	4% of measured value according to VDI/VDE 3513-2 ( $q_G = 50\%$ )
Max. permissible error DK47 / DK800	2% of full scale range
	2.5% of measured value according to VDI/VDE 3513-2 ( $q_G = 50\%$ )
Max. permissible error DK48	1% of full scale range
	1% of measured value according to VDI/VDE 3513-2 ( $q_G = 50\%$ )

# **Operating conditions**

Temperature		
Max. operating temperature TS	Depending on the version (refer to nameplate)	
	-5+100°C / +23+212°F	
Max. medium temperature	Standard: -5+100°C / +23+212°F	
	With limit switches: -5+65°C / +23+149°F	
Max. ambient temperature	Standard: -20+100°C / -4+212°F	
	With limit switches: -20+65°C / -4+149°F	
Other temperatures on request		
Pressure		
Max. operating pressure PS	Depending on the version (refer to nameplate)	
	<b>DK/R</b> (stainless steel top and bottom fitting): 10 barg / 145 psig	
	<b>DK/N</b> (brass top and bottom fitting): 10 barg / 145 psig	
	<b>DK/PV</b> (PVDF top and bottom fitting): 4 barg / 58 psig	
Test pressure PT	Depending on the version (refer to nameplate)	
Higher pressures on request

# Materials

Stainless steel 1.4404 / 316 L, nickel-plated brass, PVDF (not available for DK48)					
Option: Hastelloy <sup>®</sup> C4 / 2.4610					
Borosilicate glass					
Ball: stainless steel 1.4401 / 316					
Options: glass, Alloy C4 / 2.4610 (6 mm), Alloy C276 / 2.4819 (4 mm)					
AIII: stainless steel 1.4404 / 316 L, aluminium, Polypropylene (PP)					
Stainless steel 1.4571 / 316 Ti					
Stainless steel 1.4404 / 316 L					
Standard: PTFE / FPM					
Option: PTFE / FFKM, PTFE / EPDM, EPDM, FFKM					
Polycarbonate					

# Process connections

Standard	1/4" NPT female
Option	G1/4, Ermeto 6 or 8, tube connection 6 mm or 8 mm, Dilo, Gyrolok, Swagelok
	Other connections on request

Table 7-11: Measuring ranges for valves

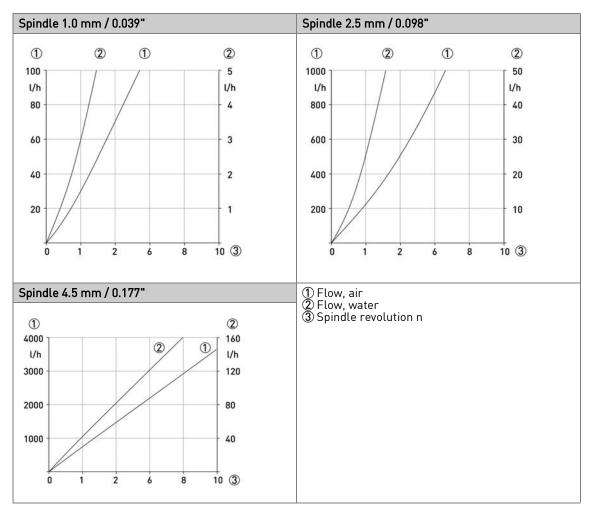

Table 7-12: Valve characteristics

### 7.6 Flow regulators for variable pressure

The flow regulators are used to provide constant flow rates in the case of variable inlet or outlet pressures. Minimum pressures are required to operate the regulators (refer to regulator characteristics).

#### INFORMATION!

*Flow regulators are not equivalent to pressure regulators / pressure reducing valves!* 

### ① Flow regulator for variable inlet pressure, type RE, NRE

The regulators keep the flow rate constant in the case of a variable inlet pressure and a constant outlet pressure.

RE-1000	Current flow rate:	1000 l/h air
	Outlet pressure p2 constant:	1.013 bara / 14.7 psia

Table 7-13: Example for flow regulator for variable inlet pressure

The flow rate in the device remains constant with a fluctuating inlet pressure greater than 0.5 bar / 7.25 psi.

### 2 Flow regulator for variable outlet pressure, type RA, NRA

The regulators keep the flow rate constant in the case of a constant inlet pressure and a variable outlet pressure.

There must be a pressure differential between the inlet and the outlet pressure for the flow regulators to function. The inlet pressure p1 must always be greater than the outlet pressure p2.

NRA-800	Current flow rate:	800 l/h air
	Inlet pressure p1 constant:	6 bar / 87 psi

Table 7-14: Example for flow regulator for variable outlet pressure

The flow rate in the device remains constant with a fluctuating outlet pressure greater than 0...5.5 bar / 0...79.8 psi.

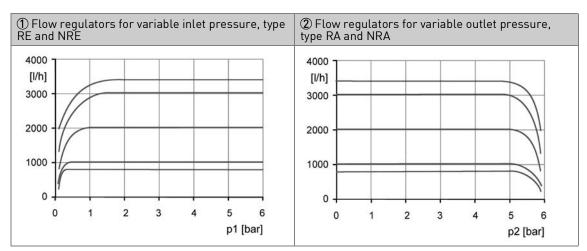

Table 7-15: Regulator characteristics

### 7.6.1 Control ranges

 Measuring span:
 10:1

 Flow values:
 Values = 100%; Water: +20°C / +68°F; Air: +20°C / +68°F, 1.013 bara / 14.7 psia

		Мах	Min. in	Min. inlet pressure
